

# Research on the Practice of All-round Education in the Teaching of Financial Management

Baohua Gu

*School of Economics and Management, Liaoning University of Technology, Jinzhou, Liaoning, China*

**Abstract:** The teaching of professional courses in universities transmits professional knowledge to students, and needs to pay attention to all-round education for students. Taking the teaching of Financial Management as an example, this paper discusses the application of all-round education in professional course teaching, and designs the application of all-round education in professional course teaching based on Superstar learning platform. The teaching of financial management course requires students to master professional financial knowledge, and establish a sense of patriotism and family, with a high sense of all-round quality and social responsibility, so as to cultivate financial management talents with both professional skills and noble morality.

**Keywords:** Financial Management; All-round Education; Cultivate Virtues and Morality; Teaching Design; Innovative Education; Educational Effectiveness

## 1. Introduction

In colleges and universities, cultivating people by virtue is not only a kind of educational idea, but also a kind of educational practice, which requires educators to integrate all-round education into students' daily study and life by means of teaching by words and deeds, guidance and demonstration, etc. help them establish a correct world outlook, outlook on life and values, and achieve all-round development [1].

## 2. The Purpose of Integrating All-round Education into Curriculum Teaching

**2.1 We Should Cultivate the Feelings of Family and Country, Combine Curriculum Teaching with Patriotism Education, and Carry out the Fundamental Task of**

## Establishing Morality and Cultivating People

Integrating the elements of all-round education into the course of financial management and aiming at cultivating students' feelings of family and country can not only help students form correct values and sense of social responsibility, but also stimulate their patriotism and determination to contribute to the development of the country. You can introduce to the students that Jinzhou, where the school is located, is a heroic city, and Liaoning University of Technology is a university built on the battle site of the distribution pool. It is necessary to carry forward the fighting spirit of the distribution pool in Jinzhou and help to cultivate the students' feelings of overall vision and the country.

## 2.2 Improve Professional Accomplishment, Combine Curriculum Teaching with Professional Ethics Education, and Establish a Correct Outlook on life, Morality and Values

Financial management is a field that highly depends on honesty. It is necessary to make students realize the value of honesty in financial management. At the same time, we should cultivate students' professional ethics and let them understand that as financial managers, they should adhere to the principles of fairness, fairness and openness and contribute to the healthy development of enterprises [2].

## 2.3 Strengthen Self-Cultivation, Combine Course Teaching with the Promotion of Personal Cultivation, and Shape an Optimistic and Positive Personality

All-round education in the course of financial management also plays an important role in strengthening students' self-cultivation. Self-cultivation refers to the process of

self-reflection, self-improvement and self-improvement in the aspects of thought, all-roundity and behavior. The course of financial management can cultivate students' sense of self-discipline, team spirit, communication ability, all-round bottom line and ethical requirements, so as to consciously strengthen self-cultivation and form sound personality and good all-round quality, to lay a solid foundation for their future development [3].

### **3. A Case Study of All-round Education Teaching Design in the Course of Financial Management**

This paper takes the "time value of funds" in the financial management course as an example to design the all-round education of the course.

#### **3.1 Course Teaching Goal**

Knowledge and ability goal: establish the concept of the time value of funds, and master the calculation method of the time value of funds. Train students to accurately judge the type of time value of funds, correctly calculate the time value of funds, and have the preliminary skills of fund management.

The goal of all-round education in the course is to dynamically look at the value of funds, to make flexible use of time value, to establish basic values for personal and corporate financial management, to improve the level of fund management, and to establish correct values [4].

Feelings of home and country: through the capital time value course, we can cultivate students' financial literacy and risk management awareness, so that they can better deal with the uncertainty of the financial market and understand the national macroeconomic policy.

Personal growth struggle spirit, contract spirit; correct consumption concept, money values and risk control concept [5].

#### **3.2 Thoughts on the Design of Curriculum All-round Education**

Make use of the network teaching resource platform, adopt the method of "online and offline mixed teaching", through case teaching, enlightening teaching and task-based teaching, integrate the elements of all-round education

into the course teaching, so that the spring rain moistens everything quietly [6].

### **3.3 Implementation of the Teaching Process of Curriculum All-round Education**

**3.3.1 All-round education of pre-class learning**  
Before class, teachers set up web-based teaching resources, upload teaching cases on the e-learning platform, and release preview tasks through the e-learning platform [7]:

Read the case of the time value of money (Napoleon's roses, the huge bill in Tennessee, Switzerland) and answer the question.

Students collect campus loan cases, think about the harm of campus loan, and establish a sense of self-protection.

Read through the textbook and complete the theoretical knowledge test before class.

**3.3.2 All-round education in Teaching**

By examining the students' pre-class preview session, ask "how does a bouquet of roses evolve to 1.87 million francs?" How did the \$126 billion bill come out in Tennessee, Switzerland? "Stimulate students' interest in learning and arouse their enthusiasm for learning. Guide the students to answer the professional term "compound interest", and lead to the teaching content of the course-the time value of capital.

**3.3.2.1 All-round education factors in the concept of time value of funds**

The time value of capital refers to "the increment of capital over time in the process of production and circulation"[8].

"An old lady buried 100000 yuan of hard-earned money in the ground, and four years later it was dug up and rotted!" to guide students to think about the characteristics of the time value of funds: funds in pause have no time value. Guide students to establish a correct concept of financial management, through the event of the old lady burying money, let students understand the important characteristics of the time value of funds.

**3.3.2.2 Factors of all-round education in the calculation of time value of funds**

The time value of capital comes from compound interest. The calculation of the time value of capital mainly includes the calculation of final value and present value of compound interest, the final value and present value of annuity (ordinary annuity, prepaid annuity, perpetual annuity, deferred annuity), as well as

the calculation of interest rate and interest period.

The power of compound interest: "if you don't accumulate steps, you can't reach thousands of miles; if you don't accumulate small streams, you can't become rivers and seas." guide students to learn from the excellent traditional culture of the Chinese nation, deeply understand that they must be down-to-earth, dare to overcome difficulties for a long time, and persevere to the end in order to achieve the ultimate goal.

After the study of the calculation method of time value, enter the question link, ask the students to tell the "campus loan case" arranged and searched before class, let the students intuitively and deeply understand the harm of "campus loan", set up rational consumption, do not blindly compare with the concept, remind college students to establish a correct and rational concept of consumption, protect their privacy, cultivate correct professional ethics, and realize the importance of honesty. Through professional study, let students set up the awareness of preventing network fraud.

In the case of Napoleon's Rose, it not only embodies the time value of capital-the power of compound interest, but also implies the spirit of contract, which promotes students' self-responsibility and sets up the spirit of contract.

3.3.2.3 The all-round Education factors of the significance of Capital time value

The time value of capital is an economic category under the condition of commodity production and commodity exchange. as long as there is commodity production and commodity exchange, the time value of capital is bound to exist, and its significance lies in reflecting the objective law of capital movement. the time value of funds reveals the value increment that occurs with the passage of time in the process of turnover. The time value of funds provides an important basis for the selection of investment schemes. in financial management and investment decisions, the influence of the time value of funds must be fully considered in order to achieve the optimal allocation of funds and maximize benefits.

So that students can deeply understand the basic national policy of reform and opening up, and realize the contribution of capital in theory

and policy. More than 40 years of reform and opening up have enabled China's economy to achieve rapid growth and become the second largest economy in the world. Through the introduction of foreign capital, technology and management experience, and the reform of the mode of production and industrial structure, the living standards of the Chinese people have improved significantly, promoted all-round social progress, and made important contributions to the development of the world economy. China's international status and influence are constantly rising, and it has become an important force in safeguarding world peace and stability.

3.3.3 All-round education of after-class learning

Students are required to write answers on paper and upload photos to Superstar Learning Tong through the special exercise of "time value of funds" released through the online platform. It is required to analyze the case, publish the learning experience in the learning discussion area, strengthen the understanding and application of the value of time, and make students deeply aware of the harm of campus loan again.

At the same time, emphasize the independent completion, can not plagiarize, carry on the honesty education to the students.

### 3.4 Teaching Reflection

3.4.1 Effect of implementation

Financial management integrates all-round education, teaching and educating people is silent.

Through the study of this course, students can establish the concept of time value of funds, master the calculation method of time value of funds, understand the application of time value of funds, and form the ability of fund management

Cultivate students' spirit of struggle and contract, set up correct and rational consumption concept and risk prevention consciousness, cultivate students' concept of property, strengthen students' concept of family and country and social concept, and achieve better teaching effect.

3.4.2 Suggestion and direction of effort

The leader stressed: "when speaking theory, we should be approachable, let Marx speak Chinese, let great experts speak ordinary words, turn basic principles into vivid truth,

and turn fundamental methods into effective methods."

Curriculum all-round education needs innovative teaching methods and means, such as heuristic, inquiry, discussion and other teaching methods. In order to integrate all-round education into the teaching content of professional courses, we also need to make use of modern information technology means, such as web-based courses, online learning, etc., to stimulate students' interest and initiative in learning, fully mobilize students' autonomous learning, and improve teaching effect and learning experience.

It is necessary to take students as the center and mobilize students' subjective initiative. With the stories around the students, with real cases, let them think about the law and nature of things, it is necessary to improve the teaching effect of all-round education and cultivate qualified high-quality talents with both ability and all-round integrity.

In order to deeply explore the all-round elements of the curriculum, the core task of curriculum all-round education is to integrate ideological and all-round education into all kinds of courses and realize the organic combination of knowledge imparting and value guidance. Therefore, it is necessary to deeply explore the all-round education elements of all kinds of courses, including curriculum content, teaching methods, case analysis and so on, and combine all-round education elements with professional knowledge to form a curriculum all-round education system with discipline characteristics [9].

#### 4. Conclusion

Through the all-round education of the course "Financial Management", students can have a deeper understanding of the social value and all-round requirements of financial management. At the same time, it helps to cultivate students' comprehensive abilities such as team spirit, innovative consciousness and critical thinking, cultivate students' correct values and sense of social responsibility, and lay a solid foundation for their all-round development and social progress. In addition, all-round education also helps to improve

students' self-awareness and self-management ability, so that they can better adapt to social development and changes.
